Part A: direction error, one agent
sin-angle error of θ̂
μ = 2(1 − c) (agent's average slope of f)
1st-order ZoomSIB, fixed T0
1st-order ZoomSIB, adaptive stop
2nd-order Stein
theory: ∝ 1/|μ| (fitted at μ=2)
random direction (median 0.97)
Part A: probability of learning θ*
P(sin-angle error < 0.3)
μ
random direction: 8.5e-6
1st-order ZoomSIB, fixed T0
1st-order ZoomSIB, adaptive stop
2nd-order Stein
Part A: regret, one agent
regret ÷ random play
μ
1st-order ZoomSIB, fixed T0
1st-order ZoomSIB, adaptive stop
2nd-order Stein
