Adversarial union-connected graph
measured, B = 1
B(N−1), B = 1
measured, B = 2
B(N−1), B = 2
measured, B = 4
B(N−1), B = 4
old claim B(D_B+1) = 3B
delivery time Λ (steps)
N (agents)
Benign schedule: one edge class per step
ring, B = 1
ring, B = 2
ring, B = 4
torus, B = 1
torus, B = 2
torus, B = 4
B(N−1), B = 4
delivery time Λ (steps)
N (agents)
Random link failures, persistent flooding (N = 64)
ring (D = 32): mean
ring: worst of 200
ring: D/(1−q)
torus (D = 8): mean
torus: worst of 200
torus: D/(1−q)
delivery time Λ (steps)
link failure probability q
